SMINT.IO PLUGIN FOR ADOBE CREATIVE CLOUD

- 1 Download and install the [Smint.io Plugin for Adobe Creative Cloud](#) from the Smint.io website. Just accept all messages until you are done. Please stay patient, the installation process might take a while
- 2 Enable the Smint.io extension: Click “Window” in the top menu bar, then “Extensions”, then “Smint io”

Note: if you want, you can then dock the Smint.io extension panel to a sidebar!

- 6 Place layout files on your artboard (optional step)

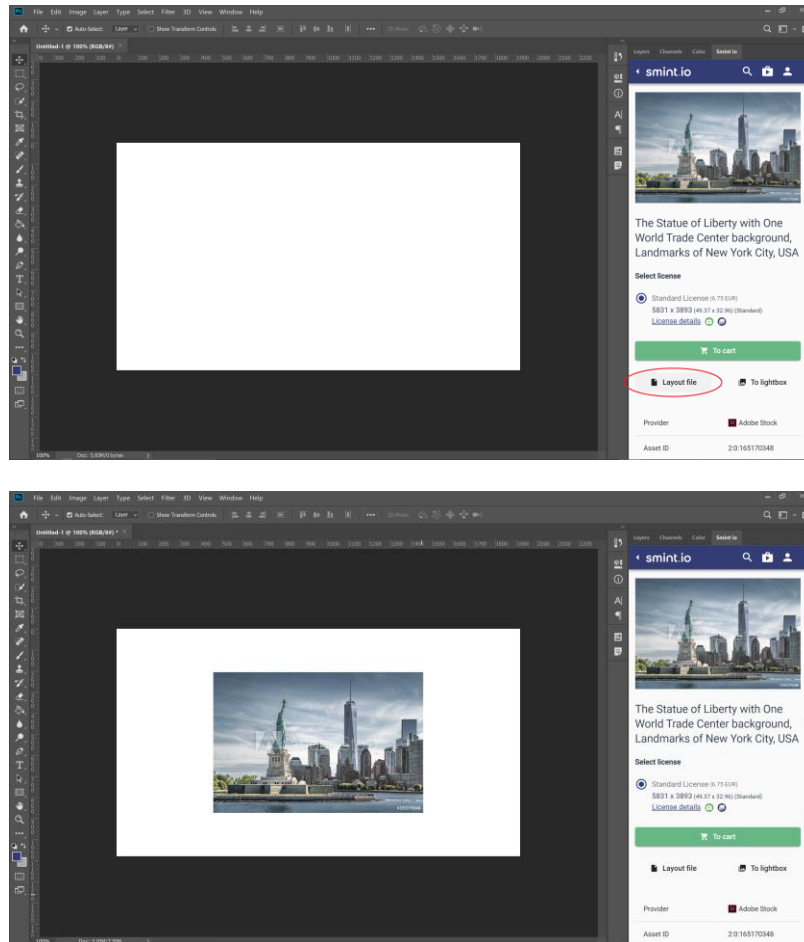

Figure 5: Place layout files

Note: In "Layers" you'll see a new layout layer added, suffixed with "-layout" which means that the image is not yet licensed!

Note: In “Layers” you’ll see that the layout layer has been renamed and now clearly indicates that the image has been licensed already!

Downloaded files will be stored like described here:

- 1) If your artboard file has already been stored, we will create a folder called “Smint.io” next to that file. Within that folder, we will put a subfolder “layout” where we store layout files, and a subfolder “full-licensed” where we will store high-res files.
 - 2) If the artboard file has NOT been stored yet, we will create the same folder structure within your personal “Downloads” directory and store the file there.
 - 3) If the “Downloads” directory can not be found or we can not store the file there, we will create the same folder structure in the computer’s temporary folder and store the file there.
- 9 Congratulations! You are done! Please get in touch at support@smint.io if you got more questions!
